

# STOP AI DATA LEAKS BEFORE THEY START

FortressAI protects your IP from ChatGPT, Copilot, and public AI tools—at the source.

Public AI like tools Chat GPT, Copilot, and Gemini are transforming business—but they also open the door for secrets, private data, and IP to leak..

Public AI tools like ChatGPT, Copilot, and Gemini are transforming business — but they also open new doors for data leaks and compliance risks. Traditional security tools weren't built for this moment. Most can't stop what's shared in prompts, and they can't prove what was exposed. That's why Cyber Crucible created FortressAI — an advanced security solution that prevents AI data leaks in real time. Simple, seamless, and powerful.

## Why Traditional Solutions Fail in an AI World.

Most solutions assume you're okay putting your proprietary data into an AI system—so their answer is to dump everything into a private AI and hope it stays secure, current, and fully trained.

But if you don't trust AI with your sensitive data in the first place...why is the solution to give it more?

### Let's break down the problem:

➤ **Data Loss Prevention (DLP):**

Easy to bypass, full of false positives, and too brittle to handle evolving, nuanced proprietary data.

➤ **AI Firewalls:**

Only filter outbound traffic—they can't stop a compromised user or detect when an insider misuses data within the approved boundary.

➤ **Data Classification & Redaction**

Inconsistent and error-prone. If you miss just one piece of sensitive data, modern prompt injection techniques will find it.

➤ **Private LLMs:**

Expensive to build, harder to maintain, and outdated the moment new public models emerge. You end up feeding your crown jewels into a system you have to babysit forever.

### The Result

Massive gaps that attackers—and even well-meaning employees—can exploit. It's not just risky. It's upside-down security thinking.

## CONTACT

# How FortressAI Protects What Others Can't

Unlike other tools that only filter traffic or rely on complex policy setups, FortressAI protects your data at the source.

## FortressAI for Security

- Stops cyberattacks before they can access sensitive data.
- Shuts down AI programs that are hacked or misused by attackers.
- Works even if employees install or browse to unapproved AI tools.

## FortressAI for Privacy

- Prevents you or your employees from accidentally or intentionally uploading sensitive or proprietary data into public AI tools.
- No policy management, no complicated setup.
- Simple alerts or reports show exactly who, when, and where a privacy risk was prevented.
- Perfect for teachers with students, families worried about online privacy, and companies who don't want their data showing up in AI systems.

## FortressAI for Compliance

- Prevents employees from violating regulatory or corporate compliance requirements.
- Reports show which AI tools are being used, by whom, and whether data handling stayed compliant.
- Provides audit-ready metrics to prove compliance and avoid costly fines.
- Works regardless of whether a user has permission to install or access an AI tool — FortressAI enforces the protection either way.

## The FortressAI Advantage

Security at the core. Speed at the surface.

Here's why leading organizations are choosing FortressAI:

### True Prevention, Not Just Detection

FortressAI stops leaks in real time — before they leave your system.

### Business Continuity Without the Crisis

Your business keeps running smoothly without costly breaches or reputational damage.

### Privacy & Compliance Built In

Easily block AI data leaks and get simple, clear reports for managers and audits.

### Adopt AI Without the Risk

Use ChatGPT, Copilot, and other AI tools safely while protecting sensitive data.

## Take Back Control in an AI-Driven World

AI tools are evolving fast — and so are the risks. Don't wait for a data leak to rethink your strategy. FortressAI by Cyber Crucible gives your organization the protection traditional tools can't, so you can embrace AI without losing control of your data.
